

BOARD CAMP GROVE

BOARD CAMP GROVE OVERVIEW

Relative Overall Vulnerability

SEVERE
9.0

This grove is ranked **SEVERE** for Relative Overall Vulnerability due to:

Wildfire Vulnerability

LOW - 1.1

Regen Vulnerability

SEVERE - 9.0

See the [Grove Health & Resilience](#) section below for more information.

Relative Management Priority

MEDIUM
4.5

This grove is ranked **MEDIUM** for Relative Management Priority due to:

Overall Vulnerability

SEVERE - 9.0

Treatment Feasibility

POOR - 0.0

See the [Management Considerations](#) section below for more information.

Grove Information

Grove Size (Acres)	48
Location	Kaweah River Watershed, Tulare County
Management Unit(s)	Sequoia - Kings Canyon National Park
Land Steward(s)	NPS SEKI

About Board Camp Grove

Board Camp Grove is a 48-acre grove in the Kaweah River Watershed region situated between 5,717 - 7,155 feet elevation at 36.73097°N. It is managed by Sequoia-Kings Canyon National Park. The grove is very remote and occurs in the drainage of an unnamed tributary to the South Fork of the Kaweah River. During the 2020 Castle Fire, Board Camp Grove experienced high tree mortality - nearly every giant sequoia died.

BOARD CAMP GROVE HEALTH & RESILIENCE

SEVERE
9.0

Board Camp Grove is ranked **Severe** for Relative Overall Vulnerability because it is at a **Low** risk of being negatively impacted by the effects of severe wildfire and at **Severe** risk for inadequate natural regeneration.

Relative Overall
Vulnerability

Additionally, Board Camp Grove is at **Low** risk for negative impacts from drought stress, **Low** levels of tree mortality have been detected in the grove, and the presence and activity of beetles in the grove is **None Observed**. 100% of Board Camp Grove has burned in large fires since 1984. See below for more detailed information.

Components of Relative Overall Vulnerability

Relative Overall Vulnerability is based on **Wildfire Vulnerability** and **Regeneration Vulnerability** using an area-weighted calculation. See [Grove Assessment Analysis Methods](#) for more details.

The pie charts below provide the percentage of the grove with high, medium, and low vulnerabilities. Click on the charts to view interactive maps of these vulnerabilities within the grove.

Wildfire Vulnerability

LOW - 1.1

Regeneration Vulnerability

SEVERE - 9.0

Additional Grove Health & Resilience Information

Below is additional information about Board Camp Grove's Health & Resilience. These data, their inputs, and any available notes and updates may be found in the [Grove Resilience Datasheet](#).

Relative Drought Stress

LOW

Relative Drought Stress in Board Camp Grove is Low based on an area-weighted average. Click on the chart for an interactive map.

Beetle Activity

NONE OBSERVED

Beetle Activity in Board Camp Grove has not been observed by grove managers.

Please see the [Grove Resilience Datasheet](#) for details.

Tree Mortality

LOW

Tree Mortality in Board Camp Grove is Low according to the most current available USFS dead canopy data.

Please see the [Grove Resilience Datasheet](#) for details.

Wildfire History

The table below provides information about large wildfires in this grove recorded since 1984. See [this map of wildfires and locations of high severity fire](#).

Wildfires	CASTLE - 2020
% of grove burned	100%
% of grove unburned	0%
Fire Return Interval Departure	High

The chart below provides the percentages of the grove burned at different levels of severity for each wildfire since 1984.

BOARD CAMP GROVE MANAGEMENT CONSIDERATIONS

MEDIUM
4.5

Board Camp Grove is ranked **Medium** for Relative Management Priority because it has **Severe** Relative Overall Vulnerability and **Poor** feasibility for implementing management actions toward restoration goals.

Relative Management Priority

Additionally, the grove is 5.7 miles from a community and is 2.6 miles from recreational infrastructure. Most of the grove contains steep slopes. See below for more detailed information.

Components of Relative Management Priority

Relative Management Priority is determined by combining the **Relative Overall Vulnerability** and **Treatment Feasibility** ranks. See [Grove Assessment Analysis Methods](#) for more details.

Relative Overall Vulnerability

SEVERE - 9.0

See the [Health & Resilience](#) section above for the component metrics for the Relative Overall Vulnerability rank.

Treatment Feasibility

POOR - 0.0

Special Land Designation	John Krebs Wilderness Area
Grove Manager Opinion	Fuel Treatments are Unlikely or Prohibited
Remote	Yes

Additional Management Considerations

Below is additional information relevant to Board Camp Grove's Management Considerations. These data, their inputs, and any available notes and updates may be found in the [Grove Resilience Datasheet](#).

Treatment History

The table below lists treatment projects in and 90 meters around this grove implemented **since 2022**. See this [map of grove treatments](#).

Treatment Type	% of Grove	Acres
Mechanical Treatments	0%	0
Prescribed Fire	0%	0
Pile Treatments	0%	0
Pile Burns	0%	0
Replanting	0%	0

Management Recommendations

The table below provides an estimate of the percentage and acreage of the grove that are recommended for evaluation for treatment based on the Vulnerability Models. See this [map of Grove Vulnerability Models](#).

Treatment Need	% of Grove	Acres
Fuels Reduction/Restoration	0%	0
Reforestation	90.1%	43.248
