

CABIN CREEK GROVE

CABIN CREEK GROVE OVERVIEW

Relative Overall Vulnerability

MODERATE
4.9

This grove is ranked **MODERATE** for Relative Overall Vulnerability due to:

Wildfire Vulnerability

MODERATE - 4.9

Regen Vulnerability

LOW - 0.6

See the [Grove Health & Resilience](#) section below for more information.

Relative Management Priority

MEDIUM
4.9

This grove is ranked **MEDIUM** for Relative Management Priority due to:

Overall Vulnerability

MODERATE - 4.9

Treatment Feasibility

GOOD - 10.0

See the [Management Considerations](#) section below for more information.

Grove Information

Grove Size (Acres)	150
Location	Kings River Watershed, Fresno County
Management Unit(s)	Giant Sequoia National Monument / Sequoia National Forest
Land Steward(s)	USFS SNF & SQF GSNM

About Cabin Creek Grove

Cabin Creek Grove is a 150-acre grove in the Kings River Watershed region situated between 5,300 - 6,846 feet elevation at 36.83147°N. It is part of the Converse Basin Complex and managed by Giant Sequoia National Monument/Sequoia National Forest. The grove is within a wilderness area and located along Cabin Creek, a tributary to the Kings River National Recreation Trail. Cabin Creek Grove is home to the Boole Tree - the sixth largest living giant sequoia.

CABIN CREEK GROVE HEALTH & RESILIENCE

MODERATE
4.9

Cabin Creek Grove is ranked **Moderate** for Relative Overall Vulnerability because it is at a **Moderate** risk of being negatively impacted by the effects of severe wildfire and at **Low** risk for inadequate natural regeneration.

Relative Overall Vulnerability

Additionally, Cabin Creek Grove is at **Low** risk for negative impacts from drought stress, **Low** levels of tree mortality have been detected in the grove, and the presence and activity of beetles in the grove is **Unknown**. 100% of Cabin Creek Grove has burned in large fires since 1984. See below for more detailed information.

Components of Relative Overall Vulnerability

Relative Overall Vulnerability is based on **Wildfire Vulnerability** and **Regeneration Vulnerability** using an area-weighted calculation. See [Grove Assessment Analysis Methods](#) for more details.

The pie charts below provide the percentage of the grove with high, medium, and low vulnerabilities. Click on the charts to view interactive maps of these vulnerabilities within the grove.

Wildfire Vulnerability

MODERATE - 4.9

Regeneration Vulnerability

LOW - 0.6

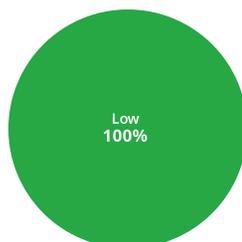

Additional Grove Health & Resilience Information

Below is additional information about Cabin Creek Grove's Health & Resilience. These data, their inputs, and any available notes and updates may be found in the [Grove Resilience Datasheet](#).

Relative Drought Stress

LOW

Relative Drought Stress in Cabin Creek Grove is Low based on an area-weighted average. Click on the chart for an interactive map.

Beetle Activity

UNKNOWN

Beetle Activity in Cabin Creek Grove has not been determined. Please see the [Grove Resilience Datasheet](#) for details.

Tree Mortality

LOW

Tree Mortality in Cabin Creek Grove is Low according to the most current available USFS dead canopy data. Please see the [Grove Resilience Datasheet](#) for details.

Wildfire History

The table below provides information about large wildfires in this grove recorded since 1984. See [this map of wildfires and locations of high severity fire](#).

Wildfires	ROUGH - 2015
% of grove burned	100%
% of grove unburned	0%
Fire Return Interval Departure	Moderate

The chart below provides the percentages of the grove burned at different levels of severity for each wildfire since 1984.

MANAGEMENT CONSIDERATIONS

MEDIUM
4.9

Cabin Creek Grove is ranked **Medium** for Relative Management Priority because it has **Moderate** Relative Overall Vulnerability and **Good** feasibility for implementing management actions toward restoration goals.

Relative Management Priority

Additionally, the grove is 6.0 miles from a community and is 0.3 miles from recreational infrastructure. Historic and prehistoric sites are located within the grove. See below for more detailed information.

Components of Relative Management Priority

Relative Management Priority is determined by combining the **Relative Overall Vulnerability** and **Treatment Feasibility** ranks. See [Grove Assessment Analysis Methods](#) for more details.

Relative Overall Vulnerability

MODERATE - 4.9

See the [Health & Resilience](#) section above for the component metrics for the Relative Overall Vulnerability rank.

Treatment Feasibility

GOOD - 10.0

Special Land Designation	None
Grove Manager Opinion	Fuel Treatments are Possible
Remote	No

Additional Management Considerations

Below is additional information relevant to Cabin Creek Grove's Management Considerations. These data, their inputs, and any available notes and updates may be found in the [Grove Resilience Datasheet](#).

Treatment History

The table below lists treatment projects in and 90 meters around this grove implemented **since 2022**. See this [map of grove treatments](#).

Treatment Type	% of Grove	Acres
Mechanical Treatments	0%	0
Prescribed Fire	0%	0
Pile Treatments	0%	0
Pile Burns	0%	0
Replanting	0%	0

Management Recommendations

The table below provides an estimate of the percentage and acreage of the grove that are recommended for evaluation for treatment based on the Vulnerability Models. See this [map of Grove Vulnerability Models](#).

Treatment Need	% of Grove	Acres
Fuels Reduction/Restoration	0%	0
Reforestation	5.5%	8.25

DISCLAIMER

The information presented in the Giant Sequoia Grove Health & Resilience Assessment is intended to supplement on-the-ground knowledge of giant sequoia groves for use in conjunction with current on-the-ground knowledge of grove condition and management activities when planning fuel treatment and reforestation projects. It should not be considered the only source of information about the condition of groves.
