

LONG MEADOW GROVE

LONG MEADOW GROVE OVERVIEW

Relative Overall Vulnerability

MODERATE
2.8

This grove is ranked **MODERATE** for Relative Overall Vulnerability due to:

Wildfire Vulnerability

LOW - 0.3

Regen Vulnerability

MODERATE - 2.8

See the [Grove Health & Resilience](#) section below for more information.

Relative Management Priority

MEDIUM
2.8

This grove is ranked **MEDIUM** for Relative Management Priority due to:

Overall Vulnerability

MODERATE - 2.8

Treatment Feasibility

GOOD - 10.0

See the [Management Considerations](#) section below for more information.

Grove Information

Grove Size (Acres)	214
Location	Tule and Kern River Watershed, Tulare County
Management Unit(s)	Giant Sequoia National Monument / Sequoia National Forest
Land Steward(s)	USFS SQF GSNM

About Long Meadow Grove

Long Meadow Grove is a 214-acre grove in the Tule and Kern River Watershed region situated between 6,136 - 7,127 feet elevation at 35.98176°N. It is located on the slope that is north of the Western Divide Highway and extends to the crest of Table Mountain. A small portion of the grove is on the Horse Meadow Creek watershed side of Table Mountain ridge. The grove falls within the Long Meadow Creek drainage, in the Kern River watershed. Long Meadow Grove is managed by Giant Sequoia National Monument/Sequoia National Forest and is one of the most accessible groves in the Monument. The popular Trail of 100 Giants winds through this Long Meadow Grove and there is high recreation use in the area. Old growth sequoias have never been logged, however, in the mid-1980's some of the grove was heavily logged for non-sequoia conifers.

LONG MEADOW GROVE HEALTH & RESILIENCE

MODERATE
2.8

Long Meadow Grove is ranked **Moderate** for Relative Overall Vulnerability because it is at a **Low** risk of being negatively impacted by the effects of severe wildfire and at **Moderate** risk for inadequate natural regeneration.

Relative Overall Vulnerability

Additionally, Long Meadow Grove is at **Moderate** risk for negative impacts from drought stress, **Low** levels of tree mortality have been detected in the grove, and the presence and activity of beetles in the grove is **Unknown**. 100% of Long Meadow Grove has burned in large fires since 1984. See below for more detailed information.

Components of Relative Overall Vulnerability

Relative Overall Vulnerability is based on **Wildfire Vulnerability** and **Regeneration Vulnerability** using an area-weighted calculation. See [Grove Assessment Analysis Methods](#) for more details.

The pie charts below provide the percentage of the grove with high, medium, and low vulnerabilities. Click on the charts to view interactive maps of these vulnerabilities within the grove.

Wildfire Vulnerability

LOW - 0.3

Regeneration Vulnerability

MODERATE - 2.8

Additional Grove Health & Resilience Information

Below is additional information about Long Meadow Grove's Health & Resilience. These data, their inputs, and any available notes and updates may be found in the [Grove Resilience Datasheet](#).

Relative Drought Stress

MODERATE

Relative Drought Stress in Long Meadow Grove is Moderate based on an area-weighted average. Click on the chart for an interactive map.

Beetle Activity

UNKNOWN

Beetle Activity in Long Meadow Grove has not been determined. Please see the [Grove Resilience Datasheet](#) for details.

Tree Mortality

LOW

Tree Mortality in Long Meadow Grove is Low according to the most current available USFS dead canopy data. Please see the [Grove Resilience Datasheet](#) for details.

Wildfire History

The table below provides information about large wildfires in this grove recorded since 1984. See [this map of wildfires and locations of high severity fire](#).

Wildfires	WINDY - 2021, MEADOW - 2016
% of grove burned	100%
% of grove unburned	0%
Fire Return Interval Departure	High

The chart below provides the percentages of the grove burned at different levels of severity for each wildfire since 1984.

MANAGEMENT CONSIDERATIONS

MEDIUM
2.8

Long Meadow Grove is ranked **Medium** for Relative Management Priority because it has **Moderate** Relative Overall Vulnerability and **Good** feasibility for implementing management actions toward restoration goals.

Relative Management
Priority

Additionally, the grove is 5.9 miles from a community and contains recreational infrastructure. There is a high amount of outdoor recreation use in this grove. See below for more detailed information.

Components of Relative Management Priority

Relative Management Priority is determined by combining the **Relative Overall Vulnerability** and **Treatment Feasibility** ranks. See [Grove Assessment Analysis Methods](#) for more details.

Relative Overall Vulnerability

MODERATE - 2.8

See the [Health & Resilience](#) section above for the component metrics for the Relative Overall Vulnerability rank.

Treatment Feasibility

GOOD - 10.0

Special Land Designation	None
Grove Manager Opinion	Fuel Treatments are Possible
Remote	No

Additional Management Considerations

Below is additional information relevant to Long Meadow Grove's Management Considerations. These data, their inputs, and any available notes and updates may be found in the [Grove Resilience Datasheet](#).

Treatment History

The table below lists treatment projects in and 90 meters around this grove implemented **since 2022**. See this [map of grove treatments](#).

Treatment Type	% of Grove	Acres
Mechanical Treatments	12.7%	58.3
Prescribed Fire	18.2%	83.7
Pile Treatments	90.4%	414.6
Pile Burns	90.7%	416.1
Replanting	14.6%	66.8

Management Recommendations

The table below provides an estimate of the percentage and acreage of the grove that are recommended for evaluation for treatment based on the Vulnerability Models. See this [map of Grove Vulnerability Models](#).

Treatment Need	% of Grove	Acres
Fuels Reduction/Restoration	0%	0
Reforestation	28.5%	60.99

DISCLAIMER

The information presented in the Giant Sequoia Grove Health & Resilience Assessment is intended to supplement on-the-ground knowledge of giant sequoia groves for use in conjunction with current on-the-ground knowledge of grove condition and management activities when planning fuel treatment and reforestation projects. It should not be considered the only source of information about the condition of groves.
