

NEW ORIOLE LAKE GROVE

NEW ORIOLE LAKE GROVE OVERVIEW

Relative Overall Vulnerability

MODERATE
4.1

This grove is ranked **MODERATE** for Relative Overall Vulnerability due to:

Wildfire Vulnerability

MODERATE - 4.1

Regen Vulnerability

MODERATE - 3.5

See the [Grove Health & Resilience](#) section below for more information.

Relative Management Priority

LOW
2.0

This grove is ranked **LOW** for Relative Management Priority due to:

Overall Vulnerability

MODERATE - 4.1

Treatment Feasibility

POOR - 3.3

See the [Management Considerations](#) section below for more information.

Grove Information

Grove Size (Acres)	15
Location	Kaweah River Watershed, Tulare County
Management Unit(s)	Sequoia - Kings Canyon National Park
Land Steward(s)	NPS SEKI

About New Oriole Lake Grove

New Oriole Lake Grove is a 15-acre grove in the Kaweah River Watershed region situated between 5,670 - 6,049 feet elevation at 36.45107°N. It is managed by Sequoia-Kings Canyon National Park and located along the headwaters of a small tributary to Squirrel Creek, tributary to the East Fork of the Kaweah River. The grove is quite remote and can only be accessed by difficult cross-country travel.

HEALTH & RESILIENCE

MODERATE
4.1

Relative Overall Vulnerability

New Oriole Lake Grove is ranked **Moderate** for Relative Overall Vulnerability because it is at a **Moderate** risk of being negatively impacted by the effects of severe wildfire and at **Moderate** risk for inadequate natural regeneration.

Additionally, New Oriole Lake Grove is at **Moderate** risk for negative impacts from drought stress, **Low** levels of tree mortality have been detected in the grove, and the presence and activity of beetles in the grove is **Unknown**. 100% of New Oriole Lake Grove has burned in large fires since 1984. See below for more detailed information.

Components of Relative Overall Vulnerability

Relative Overall Vulnerability is based on **Wildfire Vulnerability** and **Regeneration Vulnerability** using an area-weighted calculation. See [Grove Assessment Analysis Methods](#) for more details.

The pie charts below provide the percentage of the grove with high, medium, and low vulnerabilities. Click on the charts to view interactive maps of these vulnerabilities within the grove.

Wildfire Vulnerability

MODERATE - 4.1

Regeneration Vulnerability

MODERATE - 3.5

Additional Grove Health & Resilience Information

Below is additional information about New Oriole Lake Grove's Health & Resilience. These data, their inputs, and any available notes and updates may be found in the [Grove Resilience Datasheet](#).

Relative Drought Stress

MODERATE

Relative Drought Stress in New Oriole Lake Grove is Moderate based on an area-weighted average. Click on the chart for an interactive map.

Beetle Activity

UNKNOWN

Beetle Activity in New Oriole Lake Grove has not been determined. Please see the [Grove Resilience Datasheet](#) for details.

Tree Mortality

LOW

Tree Mortality in New Oriole Lake Grove is Low according to the most current available USFS dead canopy data. Please see the [Grove Resilience Datasheet](#) for details.

Wildfire History

The table below provides information about large wildfires in this grove recorded since 1984. See [this map of wildfires and locations of high severity fire](#).

Wildfires	KNP COMPLEX - 2021
% of grove burned	100%
% of grove unburned	0%
Fire Return Interval Departure	Moderate

The chart below provides the percentages of the grove burned at different levels of severity for each wildfire since 1984.

MANAGEMENT CONSIDERATIONS

LOW
2.0

New Oriole Lake Grove is ranked **Low** for Relative Management Priority because it has **Moderate** Relative Overall Vulnerability and **Poor** feasibility for implementing management actions toward restoration goals.

**Relative Management
Priority**

Additionally, the grove is 4.4 miles from a community and is 3.5 miles from recreational infrastructure. See below for more detailed information.

Components of Relative Management Priority

Relative Management Priority is determined by combining the **Relative Overall Vulnerability** and **Treatment Feasibility** ranks. See [Grove Assessment Analysis Methods](#) for more details.

Relative Overall Vulnerability

MODERATE - 4.1

See the [Health & Resilience](#) section above for the component metrics for the Relative Overall Vulnerability rank.

Treatment Feasibility

POOR - 3.3

Special Land Designation	Sequoia-Kings Canyon Wilderness Area
Grove Manager Opinion	Unknown
Remote	Yes

Additional Management Considerations

Below is additional information relevant to New Oriole Lake Grove's Management Considerations. These data, their inputs, and any available notes and updates may be found in the [Grove Resilience Datasheet](#).

Treatment History

The table below lists treatment projects in and 90 meters around this grove implemented **since 2022**. See this [map of grove treatments](#).

Treatment Type	% of Grove	Acres
Mechanical Treatments	0%	0
Prescribed Fire	0%	0
Pile Treatments	0%	0
Pile Burns	0%	0
Replanting	0%	0

Management Recommendations

The table below provides an estimate of the percentage and acreage of the grove that are recommended for evaluation for treatment based on the Vulnerability Models. See this [map of Grove Vulnerability Models](#).

Treatment Need	% of Grove	Acres
Fuels Reduction/Restoration	0%	0
Reforestation	35%	5.25
