

# STARVATION CREEK GROVE

## STARVATION CREEK GROVE OVERVIEW

### Relative Overall Vulnerability

**SEVERE**  
9.7

This grove is ranked **SEVERE** for Relative Overall Vulnerability due to:

#### Wildfire Vulnerability

**LOW - 1.3**

#### Regen Vulnerability

**SEVERE - 9.7**

See the [Grove Health & Resilience](#) section below for more information.

### Relative Management Priority

**HIGHEST**  
9.7

This grove is ranked **HIGHEST** for Relative Management Priority due to:

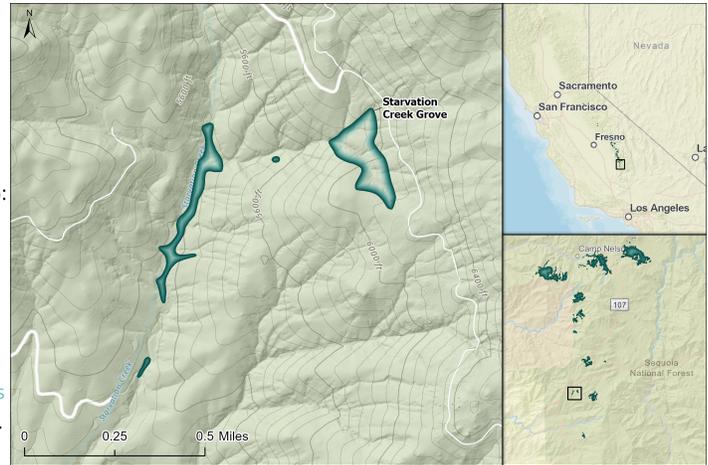

#### Overall Vulnerability

**SEVERE - 9.7**

#### Treatment Feasibility

**GOOD - 10.0**

See the [Management Considerations](#) section below for more information.

### Grove Information

Grove Size (Acres)	25
Location	Tule and Kern River Watershed, Tulare County
Management Unit(s)	Giant Sequoia National Monument / Sequoia National Forest
Land Steward(s)	USFS SQF GSNM

## About Starvation Creek Grove

Starvation Creek Grove is a 25-acre grove in the Tule and Kern River Watershed region, situated between 5,064 - 6,103 feet elevation at 35.93679°N. It is managed by Giant Sequoia National Monument/Sequoia National Forest and consists of two "units." This includes western unit along Starvation Creek, which has a narrow stringer configuration, and an eastern unit that is compact. In 1984, Starvation Creek Grove made history as the nesting site of the last California condor born in the wild. It was once home to many old growth sequoias, like the Condor Nest Tree - a large sequoia with a snagtop that once served as a good nesting cavity for California condors. The grove was decimated by the 2021 Windy Fire, which burned almost entirely at high severity (97%). Only a handful of large giant sequoias remain today.

# STARVATION CREEK GROVE HEALTH & RESILIENCE

SEVERE  
9.7

Starvation Creek Grove is ranked **Severe** for Relative Overall Vulnerability because it is at a **Low** risk of being negatively impacted by the effects of severe wildfire and at **Severe** risk for inadequate natural regeneration.

Relative Overall  
Vulnerability

Additionally, Starvation Creek Grove is at **Moderate** risk for negative impacts from drought stress, **Low** levels of tree mortality have been detected in the grove, and the presence and activity of beetles in the grove is **Unknown**. 100% of Starvation Creek Grove has burned in large fires since 1984. See below for more detailed information.

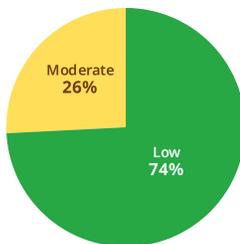

## Components of Relative Overall Vulnerability

**Relative Overall Vulnerability** is based on **Wildfire Vulnerability** and **Regeneration Vulnerability** using an area-weighted calculation. See [Grove Assessment Analysis Methods](#) for more details.

The pie charts below provide the percentage of the grove with high, medium, and low vulnerabilities. Click on the charts to view interactive maps of these vulnerabilities within the grove.

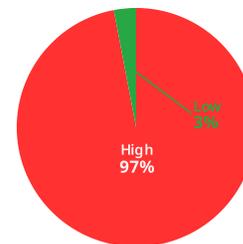

### Wildfire Vulnerability

LOW - 1.3

### Regeneration Vulnerability

SEVERE - 9.7

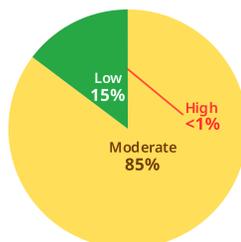

## Additional Grove Health & Resilience Information

Below is additional information about Starvation Creek Grove's Health & Resilience. These data, their inputs, and any available notes and updates may be found in the [Grove Resilience Datasheet](#).

### Relative Drought Stress

MODERATE

Relative Drought Stress in Starvation Creek Grove is Moderate based on an area-weighted average. Click on the chart for an interactive map.

### Beetle Activity

UNKNOWN

Beetle Activity in Starvation Creek Grove has not been determined. Please see the [Grove Resilience Datasheet](#) for details.

### Tree Mortality

LOW

Tree Mortality in Starvation Creek Grove is Low according to the most current available USFS dead canopy data.

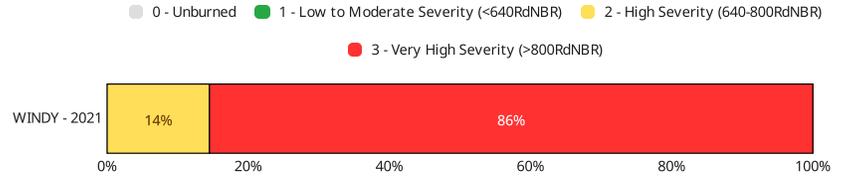

Please see the [Grove Resilience Datasheet](#) for details.

## Wildfire History

The table below provides information about large wildfires in this grove recorded since 1984. See [this map of wildfires and locations of high severity fire](#).

Wildfires	WINDY - 2021
% of grove burned	100%
% of grove unburned	0%
Fire Return Interval Department	High

The chart below provides the percentages of the grove burned at different levels of severity for each wildfire since 1984.

# STARVATION CREEK GROVE MANAGEMENT CONSIDERATIONS

**HIGHEST**  
9.7

Starvation Creek Grove is ranked **Highest** for Relative Management Priority because it has **Severe** Relative Overall Vulnerability and **Good** feasibility for implementing management actions toward restoration goals.

**Relative Management  
Priority**

Additionally, the grove is 2.4 miles from a community and is 1.0 miles from recreational infrastructure. There are only a few surviving giant sequoia trees left in this grove. See below for more detailed information.

## Components of Relative Management Priority

**Relative Management Priority** is determined by combining the **Relative Overall Vulnerability** and **Treatment Feasibility** ranks. See [Grove Assessment Analysis Methods](#) for more details.

### Relative Overall Vulnerability

**SEVERE - 9.7**

See the [Health & Resilience](#) section above for the component metrics for the Relative Overall Vulnerability rank.

### Treatment Feasibility

**GOOD - 10.0**

Special Land Designation	None
Grove Manager Opinion	Fuel Treatments are Possible
Remote	No

## Additional Management Considerations

Below is additional information relevant to Starvation Creek Grove's Management Considerations. These data, their inputs, and any available notes and updates may be found in the [Grove Resilience Datasheet](#).

### Treatment History

The table below lists treatment projects in and 90 meters around this grove implemented **since 2022**. See this [map of grove treatments](#).

Treatment Type	% of Grove	Acres
Mechanical Treatments	0%	0
Prescribed Fire	2.8%	3.6
Pile Treatments	0%	0
Pile Burns	0%	0
Replanting	10.5%	13.5

### Management Recommendations

The table below provides an estimate of the percentage and acreage of the grove that are recommended for evaluation for treatment based on the Vulnerability Models. See this [map of Grove Vulnerability Models](#).

Treatment Need	% of Grove	Acres
Fuels Reduction/Restoration	0%	0
Reforestation	97%	24.25

## DISCLAIMER

The information presented in the Giant Sequoia Grove Health & Resilience Assessment is intended to supplement on-the-ground knowledge of giant sequoia groves for use in conjunction with current on-the-ground knowledge of grove condition and management activities when planning fuel treatment and reforestation projects. It should not be considered the only source of information about the condition of groves.
