

# UPPER TULE GROVE

## UPPER TULE GROVE OVERVIEW

### Relative Overall Vulnerability

**LOW**  
0.0

This grove is ranked **LOW** for Relative Overall Vulnerability due to:

#### Wildfire Vulnerability

**LOW - 0.0**

#### Regen Vulnerability

**LOW - 0.0**

See the [Grove Health & Resilience](#) section below for more information.

### Relative Management Priority

**LOW**  
0.0

This grove is ranked **LOW** for Relative Management Priority due to:

#### Overall Vulnerability

**LOW - 0.0**

#### Treatment Feasibility

**MODERATE - 6.7**

See the [Management Considerations](#) section below for more information.

### Grove Information

Grove Size (Acres)	7
Location	Tule and Kern River Watershed, Tulare County
Management Unit(s)	Giant Sequoia National Monument / Sequoia National Forest
Land Steward(s)	USFS SQF GSNM

## About Upper Tule Grove

Upper Tule Grove is a seven-acre grove in the Tule and Kern River Watershed region situated between 7,466 - 7,917 feet elevation at 36.27763°N. It is located on the North Fork of the Middle Fork of the Tule River. The grove is managed by Giant Sequoia National Monument/Sequoia National Forest and can be found on Moses Mountain, near Long Meadow.

## HEALTH &amp; RESILIENCE

LOW  
0.0Relative Overall  
Vulnerability

Upper Tule Grove is ranked **Low** for Relative Overall Vulnerability because it is at a **Low** risk of being negatively impacted by the effects of severe wildfire and at **Low** risk for inadequate natural regeneration.

Additionally, Upper Tule Grove is at **Moderate** risk for negative impacts from drought stress, **Medium** levels of tree mortality have been detected in the grove, and the presence and activity of beetles in the grove is **Unknown**. 100% of Upper Tule Grove has burned in large fires since 1984. See below for more detailed information.

## Components of Relative Overall Vulnerability

**Relative Overall Vulnerability** is based on **Wildfire Vulnerability** and **Regeneration Vulnerability** using an area-weighted calculation. See [Grove Assessment Analysis Methods](#) for more details.

The pie charts below provide the percentage of the grove with high, medium, and low vulnerabilities. Click on the charts to view interactive maps of these vulnerabilities within the grove.

## Wildfire Vulnerability

LOW - 0.0

## Regeneration Vulnerability

LOW - 0.0

## Additional Grove Health &amp; Resilience Information

Below is additional information about Upper Tule Grove's Health & Resilience. These data, their inputs, and any available notes and updates may be found in the [Grove Resilience Datasheet](#).

## Relative Drought Stress

MODERATE

Relative Drought Stress in Upper Tule Grove is Moderate based on an area-weighted average. Click on the chart for an interactive map.

## Beetle Activity

UNKNOWN

Beetle Activity in Upper Tule Grove has not been determined. Please see the [Grove Resilience Datasheet](#) for details.

## Tree Mortality

MEDIUM

Tree Mortality in Upper Tule Grove is Medium according to the most current available USFS dead canopy data.

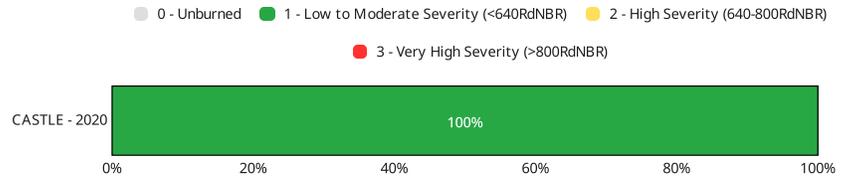

Please see the [Grove Resilience Datasheet](#) for details.

## Wildfire History

The table below provides information about large wildfires in this grove recorded since 1984. See [this map of wildfires and locations of high severity fire](#).

Wildfires	CASTLE - 2020
% of grove burned	100%
% of grove unburned	0%
Fire Return Interval Department	High

The chart below provides the percentages of the grove burned at different levels of severity for each wildfire since 1984.

# MANAGEMENT CONSIDERATIONS

LOW  
0.0

Upper Tule Grove is ranked **Low** for Relative Management Priority because it has **Low** Relative Overall Vulnerability and **Moderate** feasibility for implementing management actions toward restoration goals.

Additionally, the grove is 6.1 miles from a community and is 3.3 miles from recreational infrastructure. See below for more detailed information.

**Relative Management Priority**

## Components of Relative Management Priority

**Relative Management Priority** is determined by combining the **Relative Overall Vulnerability** and **Treatment Feasibility** ranks. See [Grove Assessment Analysis Methods](#) for more details.

### Relative Overall Vulnerability

LOW - 0.0

See the [Health & Resilience](#) section above for the component metrics for the Relative Overall Vulnerability rank.

### Treatment Feasibility

MODERATE - 6.7

Special Land Designation	Golden Trout Wilderness
Grove Manager Opinion	Fuel Treatments are Possible but Limited
Remote	No

## Additional Management Considerations

Below is additional information relevant to Upper Tule Grove's Management Considerations. These data, their inputs, and any available notes and updates may be found in the [Grove Resilience Datasheet](#).

### Treatment History

The table below lists treatment projects in and 90 meters around this grove implemented **since 2022**. See this [map of grove treatments](#).

Treatment Type	% of Grove	Acres
Mechanical Treatments	0%	0
Prescribed Fire	0%	0
Pile Treatments	0%	0
Pile Burns	0%	0
Replanting	0%	0

### Management Recommendations

The table below provides an estimate of the percentage and acreage of the grove that are recommended for evaluation for treatment based on the Vulnerability Models. See this [map of Grove Vulnerability Models](#).

Treatment Need	% of Grove	Acres
Fuels Reduction/Restoration	0%	0
Reforestation	0%	0

## DISCLAIMER

The information presented in the Giant Sequoia Grove Health & Resilience Assessment is intended to supplement on-the-ground knowledge of giant sequoia groves for use in conjunction with current on-the-ground knowledge of grove condition and management activities when planning fuel treatment and reforestation projects. It should not be considered the only source of information about the condition of groves.
